

**Amendments to the Specification**

Please amend paragraph [0038] as follows:

The two types of chambers 44, 46 in the upper portion 14 allow the upper portion 14 to adjust as different amounts of pressure are applied to different areas of the upper portion 14 by a user's body. Air can move between the two types of chambers 44, 46 through the fluid connections 58 between the chambers 44, 45~~46~~. This specialized construction, along with the pliable material of the upper portion 14, provides an increased amount of comfort above and beyond conventional air mattresses.
